

THE WHITE Paper

THE WHITE Paper

November 21, 2025 – Final 2026 Edition

(evolution and simplification of whitepaper-v1.0.0 + whitepaper-micro-v1.0.0)

#MicroEconomies (with an S): The Commerce-Backed Peer-to-Peer Money System OFiDCrypt & Giddy's Whitepaper – Final 2026 Edition

Abstract

In 2008, Bitcoin revolutionized money by removing banks from the creation process. Continuing this legacy, a small Canadian family project in 2025–2026 separated gambling from money retention. This initiative distributes real toys, T-shirts and collectibles, each containing free, perpetual internet money that grows in value with every regular purchase made.

The Two Brands

- **OFiDCrypt:** The self-marketed identity, media studio, token engine, and shared-reserve network.
- **Giddy's:** The consumer collectables and family-gift brand producing the tangible products people desire.

The Three Flagship Launch Products

- Giddy's Bouncy Ball Packet (estimated at \$10–\$20 CAD): A bag containing an assortment of high-bounce balls (3 of 9 + 1 possible Limited collectible) and one perpetual scratch card with free \$eXPB (or partner tokens).
- Giddy's Hardback Storybook: Full-colour illustrated adventure in the Giddy & Crew Universe, paired with an animated TikTok/YouTube series detailing the inception journey. Scratch card inside the back cover.
- Giddy's First T-shirt: Cute pixel-art Giddy with teleport logo on the front. Hang-tag = perpetual scratch card.

All future products follow this rule of perpetual digital gift inclusivity.

The Money Pair

- \$eXPB: A dynamic, commerce-inspired meme token—these are the free bouncy balls included in every packet.
- \$GIDDY: A commerce-backed stable token, redeemable 1:1 for USDC now, with a planned path toward partial CAD backing in the future.

The Closed Loop

A child receives a bouncy ball packet. Eventually, a parent scratches the included card to reveal a code. When redeemed, this triggers an auto-wallet deposit; delivering free \$eXPB with no KYC required. Two options are then presented:

1. Swap to \$GIDDY immediately for up to a 10% discount (or more) on the next storybook or T-shirt purchase.
2. Hold \$eXPB and watch it appreciate, as up to 15% (or more) of every packet, book, and T-shirt sold worldwide is used weekly (estimated) to buy back and partially burn \$eXPB.

The Great Split

- Left-Side Tokens: Pure gambling meme coins (e.g., Dogecoin, PEPE). These tokens serve as cultural sparks and lottery tickets, and they remain an enduring part of crypto culture.
- Right-Side Tokens: A blend of 50% memorable character and 50% real revenue. This describes the OFiDCrypt/Giddy's model.

Zero-Friction, Zero-KYC On-Ramp

- Scratch cards act as bearer instruments, redeemable at any time, even decades later.
- Claiming tokens, swapping between \$eXPB and \$GIDDY, and spending for discounts are all 100% permissionless activities.
- KYC is only required if users voluntarily opt for fiat through the optional Kraken affiliate link.

The 90/10 Flywheel

Roughly 10% of the world’s population is already in crypto today — that’s the left-side crowd: traders, degens, leverage apes, meme chasers. We don’t fight them. We **ride with them**. They bring the liquidity, the volume, and the nonstop hype. The other 90% of humanity — over 7 billion people — still have zero wallets. We onboard them silently and joyfully through right-side commerce: a \$10–20 bouncy ball packet, a storybook, a T-shirt... real products with free money inside.

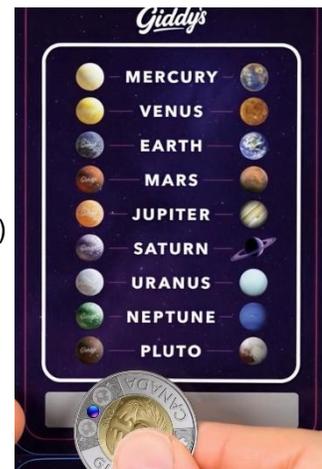

Some of that new 90% will eventually see the chart bouncing, get curious, and cross over into the 10% — trading, aping, pumping even more energy and fees back in. The 90% quietly funds real growth. The 10% keeps the entire system loud and alive.

Shared Reserves – Infinite Scalability

Any brand, from individual Etsy sellers to national retailers, can purchase \$eXPB, print compatible scratch cards, and immediately benefit from the same global liquidity pools. Large partners enhance the strength and resilience of the entire network for all participants.

Terminology We Own

- #MicroEconomies (with an “s”)
- Digital Gifting
- Dynamic Token + Stable Token (Parity)
- Right-Side System (Optionally Meme-Inspired Commerce Tokens)
- Left-Side System (Speculative Only Memes)
- The Great Split
- Lock in profits (not positions)
- EveryPacketIsMoney

Closing Statement

Satoshi launched a revolution with a PDF. We continue that revolution with an estimated \$10–\$20 bouncy ball packet that embodies the next generation of money. The revolution now bounces. OFiDCrypt provides the engine. Giddy’s delivers the joy. Solana is the blockchain. 2026 marks the beginning—forever.

OFiDCrypt – the engine

Giddy’s – the joy

Solana – the launch chain

2026 – **forever**

The revolution now bounces.
