GIDDY Stablecoin: Overview & Technical Details

Version and Basic Details

Version: 1.0 | **Date:** Oct 18, 2025 **Issuer:** OFiDCrypt (Giddy's) **Token Standard:** Solana SPL Token-2022

1. Overview

GIDDY is a **commerce-backed Canadian Dollar stablecoin** engineered to maintain **1:1 parity with CAD**. This stability is achieved through the backing of real-world revenue generated from physical product sales under Giddy's brand.

GIDDY operates as the **stable leg** within the ecosystem, working alongside the dynamic utility token eXPB BOUNCY BALL.

- **First Mint:** 00:49:18 Oct 08, 2025
- **Ticker:** GIDDY
- **Blockchain:** Solana
- **Primary Token Address:**
8kQzvMELBQGSiFmrXqLuDSpYVLKkNoXE4bUQCC14wj3Z

- **Purpose:** Stable medium of exchange, store of value, and settlement asset for Giddy's MicroEconomies.

2. Stability & Backing Mechanism

GIDDY is **revenue-anchored**:

- Revenue from product sales is swapped or allocated into stable GIDDY reserves.
- Transparent on-chain flows ensure reserves grow with commerce activity.

GIDDY Stability: GIDDY is a Canadian-dollar-backed digital asset designed for predictable value, anchored by real-world commerce and transparent reserves.

3. DLMM Pool Architecture (Metora) – Technical Breakdown

GIDDY utilizes **single-sided DLMM (Dynamic Liquidity Market Maker)** pools to provide efficient and protected liquidity.

Core Design Features:

- **Single-Sided Deposit:** Only GIDDY is initially deposited by the LP (project). The counter-asset (such as USDC) enters exclusively via user swaps and OFiDCrypt buybacks and deposits
- **Redemption Integrity:** LP withdrawals are restricted to returning the original GIDDY deposit (minus amounts needed to support active redemptions). User-provided counter-asset remains in the pool and is **not withdrawable** by the LP.
- **Swap Reversibility:** Users swapping counter-asset → GIDDY can reverse the trade (GIDDY → counter-asset) if sufficient counter-liquidity exists in the pool.
- **No Honeypot Behavior:** Smart contract is unrestricted (no transfer/sell restrictions on GIDDY). There is no malicious logic preventing exits. Metora DLMM mechanics naturally protect against full LP withdrawal of traded assets.
- **Additional Pools:** GIDDY/USDC, GIDDY/eXPB, and Raydium ONE/eXPB + GIDDY/USDC pools share allocation for deeper liquidity and arbitrage efficiency.

[BLOCKAID](#) has reviewed and cleared this architecture as **benign**.

4. Token Metadata – Live JSON

- **First Mint:** 00:49:18 Oct 08, 2025

TX / Solscan.io

5. Tokenomics & Supply Dynamics

- **Supply Model:** Dynamic, revenue-backed (minted against commerce reserves).
- **Current Supply:** ~119.247 billion GIDDY (circulating / total).
- **No pre-mine or VC allocation**—growth is directly tied to real commerce revenue.
- **Liquidity Provision:** Consistent allocation to GIDDY pools across Meteora DLMM and other platforms.

6. Use Cases

- Stable payments and settlements in the Giddy's ecosystem.
- Backing for digital gifts and credits.
- Liquidity provision and yield opportunities.
- Potential integration into Canadian fintech applications.

7. Security & Transparency

- BLOCKAID reviewed and confirmed benign status for the token and DLMM setup.
- On-chain revenue flows and public wallet activity.
- Single-sided DLMM design prevents honeypot risks.
