### Subject: Formal Request to Add Bouncy Ball (eXPB) Token – Transparent Canadian Family-Commerce Project with Real Utility and Accessibility Tools

Dear Wealthsimple Crypto Review and Partnerships Team,

I am Tokin (Madden Montgomery-Fisher), founder of OFiDCrypt, a British Columbia-based project dedicated to family-friendly Web3 commerce. We respectfully request the addition of our utility token **Bouncy Ball (eXPB)** — Solana contract:

**GsKuLQsKCEnfQxuk4icTEQjc11Av8WiqW31CxZqZpump** — for trading, deposits, and withdrawals on the Wealthsimple platform.

eXPB is already **verified and listed on CoinGecko**, providing standardized, transparent market data:

<https://www.coingecko.com/en/coins/bouncy-ball-of-ofid-fun>

#### Demonstrated Trust and Radical Transparency

Transparency is a foundational strength of OFiDCrypt. We publicly document and share every major step — liquidity burns, on-chain activity, buyer interactions, and community distributions — to build genuine trust and reduce risk for all participants.

Key examples include:

- Publicly announcing substantial buyers with direct [Solscan](#) links to their full wallets and trade history in real time:

*“An anonymous wallet can buy your token, and everyone can publicly see their full holdings and trade history in real time. Transparency like nowhere else 🍊 Huge thanks to the buyer for the support!”* ([X post](#), April 9, 2026).

- Proactive risk reduction: We applied **BLOCKAID** safety verification and collaborated with platforms through support channels (including OKX) to identify, reduce, and remove risk flags, confirming \$GIDDY as risk-free in primary markets.
- Full public documentation is available on our **Docs page**: <https://www.ofidcrypt.com/docs/main>. This includes our white paper and other project files.

As a verifiable Canadian founder, our company is active on **LinkedIn**: <https://ca.linkedin.com/company/ofidcrypt>, emphasizing safe, family-oriented digital gifting.

### Accessibility Partnership: Kinnected! Messenger Wallet

To lower barriers and make our tokens accessible, we have partnered on **Kinnected! Wallet** (a community collaboration with GFDevSoft). This revolutionary messenger + wallet app combines secure self-custody, built-in messaging, cash links, and casual games into one family-friendly experience.

It enables seamless swapping, sending, and redemption of \$eXPB, \$GIDDY, and community incentive tokens — even for recipients without the app — through single-click digital gifts in chat. Details: <https://www.ofidcrypt.com/pages/kinnected> ([X post](#), January 23, 2026) | ([X post](#), April 8, 2026)

### Real-World Utility, Toys, Commerce & Narrative Ambition

eXPB powers practical token commerce in a safe, family-focused ecosystem:

- Giddy's brand is preparing a full line of toys and collectibles for Amazon, Shopify, and our own shop. Purchases include **optional, no-strings-attached digital gifts of eXPB** (redeemable for discounts or fun), with plans for direct eXPB payments.
- We are developing a **full narrative-driven story** with Giddy's characters, TV, games (e.g., [Giddy's Blinko](#)), and adventures — aiming to scale as the **PENGU of Canada**: a beloved, family-safe Canadian brand combining storytelling, entertainment, and real utility.

SOUND ON: Promo Trailers / Visual Aid / Demonstration of Products:

**Giddy Tales** Animation ([X post](#), April 1, 2026) | **Giddy Tales** Product / Book ([X post](#), April 14, 2026) | **Our Method** ([X post](#), December 9, 2025) | **Product** ([X post](#), January 12, 2026) | **Shop** ([X post](#), April 8, 2026) | **Web App** ([X post](#), April 4, 2026)

Interestingly, while our path has led to some surface-level similarities with Pudgy Penguins, I was unaware of their project during our early development. I arrived here organically through systematic trial-and-error thinking and by iteratively discovering what families actually want in a fun, accessible Web3 experience. At its heart, our journey began differently — first inspired by my son **Tokin Junior** (whom we initially marketed as **baby Tokin**).

This personal, family-rooted origin planted the seed for the family-friendly \$GIDDY stablecoin concept and makes Giddy's inherently distinct in spirit and intent, even as we admire successful models in the space.

Our **Solana Foundation Grant Application** ([here](#)) provides a detailed overview of this commerce/loyalty model, including physical product integration and revenue redistribution.

**Token Duality – Growth + Stability** ([X post](#), December 3, 2025)

We designed **Token Duality** for user choice and reduced volatility:

- **\$eXPB** — Dynamic growth token tied to Giddy's popularity and sales redistribution.
- **\$GIDDY** — CAD-pegged stablecoin (currently USDC-backed with buybacks on Meteora/Raydium; metadata locked), ideal for gifting, payments, and everyday Canadian use — Solana contract: **8kQzvMELBQGSiFmrXqLuDSpYVLKkNoXE4bUQCC14wj3Z**

#### **Alignment with Wealthsimple's Risk-Based Review**

- **Regulatory & Compliance:** Canadian operations, full transparency, and proactive risk-flag work.
- **Liquidity & Depth:** CoinGecko visibility, Raydium/Meteora pools, documented burns, plus upcoming commerce-driven volume from toy sales.
- **Security:** Standard Solana SPL token, BLOCKAID-checked, with open-source components (e.g., Giddy Swap Bot on GitHub).
- **Client Protection:** Family-safe focus, accessible Kinnected! onboarding, no hype, on-chain openness, and utility tied to physical toys + narrative storytelling — all designed to minimize undue risk while appealing to Canadian users exploring Solana tokens like PENGU.

Links to the Solana Foundation Grant Application PDF and the Whitepaper PDF are available at the link below for your reference, in addition to the complete set of project documents: <https://www.ofidcrypt.com/docs/main>.

I am available to provide further information, on-chain records, or participate in a review call. Please let me know the best next steps.

As a brand with deep roots on X, we believe our project aligns particularly well with X's newly introduced Smart Cashtags feature — which your team has introduced as a pilot integration between X and Wealthsimple for Canadian users. Having chosen X as our primary platform, we have been consistently posting nearly every day for over two years. Our strong presence within Grok and other AI platforms further enhance discoverability. Feel free to explore any of our posts using the Grok button for additional context.

Thank you for your work making crypto safe and accessible for Canadians.

Best regards,

Token (Madden Montgomery-Fisher)
